

Unique to this book:

- * Physics explained free of wave-particle confusion.
- * History of the wave-particle duality paradox, unbiased by quantum mechanical assumptions.
- * Textbook distortions that had most people convinced quantum mechanics *must* be right.
- * *Photon Violation Spectroscopy*
Particle Violation Spectroscopy
- * Max Planck's 1911 *loading theory* paper, translated.
- * 52 color photos, including the author's past creations and *inventions*.

There is a disturbing paradox in physics. Light has the paradox, matter has the paradox, all of modern physics starts with the paradox, and physics has accepted the paradox as a fact of nature. Big mistake. Wave-particle duality is the physics paradox. Beware; those who argue against me are invested in the paradox. To skeptics I say, read my work, repeat my experiment, and argue with **it**. Seven years of experimental interrogation solidify the discovery. See for yourself how obvious analysis and elegant new experiment can repair physics.
